

# Cleaning powders against resin residues

RE Fix

250-g-bottle

**No silicone**

Both powders remove adhesive residue, prevent from further sticking and preserve the operation surface of fusing presses, irons and transport belts of fusing machines made of PTFE coated fabrics.

The Re Fix powder does not contain silicone!

The Rollax powder does contain silicone!

Rollax

250-g-bottle

**With silicone**

# How to use the cleaning powders

## How to use the cleaning powders on transport belts (above drawing):

1. Sprinkle the powder evenly onto the slowly running 100 - 170° C hot transport belt.
2. The powder will melt, permeating the residue.
3. Wipe off completely with a cloth or with our article #38130 knitted cotton hose used like a glove.
4. Repeat if necessary.

## How to use the cleaning powders on presses:

1. Sprinkle the powder evenly onto the 100 - 170°C heated surface.
2. Allow time for the powder to melt, permeating the residue.
3. Wipe off completely with a cloth or with our article #38130 knitted cotton hose used like a glove.
4. Repeat if necessary.

## How to use the cleaning powders on irons:

1. Sprinkle the powder evenly onto a piece of cleaning cloth.
2. Move the 100 - 170°C hot iron on the cleaning cloth.
3. Repeat if necessary.
